Quarterly Status Report No. 1

June 10 - September 10, 1963

ASPHERIC OPTICAL SYSTEMS

STAT

During this period we have initiated the following projects.

1. To prepare and start evaporating glassy like materials. We plan to first learn to evaporate SiO. We have installed an oxygen regulator in our evaporator, and have checked out the monitor.

2. We have nearly completed a design study of a triplet and four element lens which uses spherical surfaces. This will provide us a base of comparison to measure our progress in the design of an aspheric system.
